HMC+ Blue Coating

Protection against
harmful blue light.

HMC+ Blue.

Great AR Performance with Blue Light Protection.

synchrony

Many consumers use digital devices several hours a day. Too much blue light from these devices can not only disrupt sleep but also increase the risk of macular degeneration.

synchrony® HMC+ Blue offers protection from the harmful blue light from LED lights, digital devices, TV screens, and computers. The front of the lens uses a specifically tuned anti-reflective treatment to target and block harmful blue light, while the back of the lens uses HMC+ technology to reduce reflection and improve overall clarity for the wearer.

In addition to protection from harmful blue light, **synchrony HMC+ Blue** offers:

- ▶ Excellent scratch resistance.
- ▶ Great clarity.
- ▶ Overall durability.
- ▶ Easy, longer-lasting cleanability.

HMC+ Blue Pricing

\$60 per pair

synchrony lenses offer more designs, more practice solutions, more satisfied patients.
